

# Ecolinguistics: Language, Ecology and the Stories We Live By

BOOK NOTES

perspectives on language use and expectation. Community initiatives in language planning using ethnographic and discourse data to stress the agency of individual members are detailed in chapter 9. Hatoss' conclusion neatly summarizes the complex ecology of language and migration of Sudanese Australians.

Hatoss demonstrates how immigrants' cultural, social, and linguistic adaptation is co-constructed, dynamic, and reciprocal, based on attitudes and perceptions formed in interaction within the refugee community and amongst other members of the host country. Overall, Hatoss has not only crafted an insightful ethnographic account of a unique linguistic community, but also has provided readers with the opportunity to apply the diverse theoretical and methodological framework to other situations with vulnerable speakers. Accessible for cross-disciplinary research, this text can be used as a course book for anthropology/sociology/linguistics or more broadly as a comprehensive resource for those interested in ideological approaches to language use in cosmopolitan situations, particularly in refugee communities.

*Ecolinguistics* provides a comprehensive introduction to an emerging field that sets out to critically analyze how language is implicated in human engagement with the natural environment in both destructive and life-sustaining ways. From urban development and agribusiness, to nature writing and climate change, Arran Stibbe transports the reader through a series of engaging analyses across ten chapters that progressively develop and apply the theories and methods of ecolinguistics summarized in the introduction. The introductory chapter presents ecolinguistics as a rigorous approach well suited to reveal, resist, and intervene in the ideologies, discourses, and social practices – all different aspects of the 'stories we live by' – influencing our perception of and engagement with the natural environment. The next eight chapters proceed to delve into the different forms these stories take.

Chapter 2 begins with a theoretical overview of discourse and ideology in ecolinguistics, giving attention to a set of discourse-analytic methods and sample analyses that both expose and resist environmentally destructive discourses. In chapter
